

Example files instructions

Example file(s) for this module have been placed within this ZIP archive. You should extract the file(s) from the zip archive and place them in a convenient location on your local hard drive.

The follow-along demonstration in the video uses a copy of these* files which have been placed in the following folder location:

C:\Downloaded Example Files

- * Please ensure that only the example files for *this* module are available for you to follow along with video demonstrations and conduct exercises. Files from other modules are not suitable for this module.

Open an existing app:

Instructions for different Qlik Sense deployments[†]

Qlik Sense Desktop instructions:

- Drag & drop the example QVF file onto the *Qlik Sense Desktop* hub.

Cloud Editions of Qlik Sense (Business, Enterprise on Cloud Services, Enterprise on Kubernetes) instructions:

- Use the **Add new** button to **Upload app**.
- Drag & drop the example QVF file onto the resulting drop target.
- **Upload** to your **Personal** space.
- Click to open uploaded app.

Qlik Sense Enterprise on Windows instructions:

- May require the assistance of your *Qlik Sense Administrator* to **Import** the app into your **Personal > Work** space, using the **Qlik Management Console**.

Create a new app:

Instructions for different Qlik Sense deployments[†]

Qlik Sense Desktop instructions:

- Click the **Create new app** button. **Name** and **open** the app.
- When adding a local data source, using **Add data from files and other sources**, click on **My computer** to navigate to the location of the downloaded example files.
- When adding a local data source, using the **Script editor**, from within the **Data connections** panel of the **Data load editor**, create a new connection, choose **Folder**, and navigate to the location of the downloaded example files. You will have to name your connection and click the **Select data** icon  to select a data source.

Cloud Editions of Qlik Sense (Business, Enterprise on Cloud Services, Enterprise on Kubernetes) instructions:

- Use the **Add new** button to **Create app**. **Name** the app, place in your **Personal** space, and open.
- When adding a local data source, using **Add data from files and other sources**, click on **Data files** to navigate to the location of the downloaded example files.
- When adding a local data source, using the **Script editor**, from within the **Data connections** panel of the **Data load editor**, locate the existing connection titled: **DataFiles** and click the **Select data** icon  to select a data source.

Qlik Sense Enterprise on Windows instructions:

- Click the **Create new app** button. **Name** and **open** the app.
- When adding a local data source, using **Add data from files and other sources**, click on **Attached files** to navigate to the location of the downloaded example files.
- When adding a local data source, using the **Script editor**, from within the **Data connections** panel of the **Data load editor**, locate the existing connection titled: **Attached files** and click the **Select data** icon  to select a data source.
